Testing Script:

You are an individual who wants to use the new Keto App to find information and possibly find some local restaurants that serve keto centric foods around you.

Task 1:

Not knowing much about Keto, find a way to ask questions or look for already asked questions about how to best start the keto diet.

Task 2:

Now that you have a better grasp of the diet, look for local options to eat in a restaurant.

Task 3:

On second thought, you decide to find a restaurant that you can just get something quick and go home.

Task 4:

Still being indecisive because of the ongoing pandemic, you decide that you would rather cook your own keto meal at home but need to find how to cook something that will fit the diet.

Task 5:

Having found a recipe to cook, you doubt the validity of their carb count in the recipe. Find a way to confirm the amount of carbs in the food you wish to cook.

Results:

Things to change:

1. Majority consensus expressed their confusion to two separate buttons for take in and dine out. Said it could be one button with a filter option
2. The nutrition calculator was thought to be too complicated to calculate whole meals as it takes one ingredient at a time. Maybe link to another website that already has good functionality

Things not to change:

1. The recipes received positive feedback for simplicity of use
2. The map received positive feedback for simplicity of use and visual indication of what is close to the user.
